Energy Management System

Not just another thermostat

INTEREL is an award-winning energy management and guest-room control solution with products ranging from low-cost, WiFi networked thermostats to complex luxury room automation. Hospitality focused, INTEREL is deployed in over 45 countries and used by over 30 Million guests.

INTEREL's energy management solution (EMS) includes modern, glass thermostats and panels with user friendly icons for a superior guest experience that meets hotel brand requirements and energy management regulations. With HVAC and lighting control, INTEREL EMS manages temperature setbacks and lights when rooms are unoccupied, leading to an energy saving of 15–35%.

With the elegant EMS hospitality WiFi thermostat, INTEREL is focused on the future. EMS includes wireless and wired solutions, as well as ZigBee and BLE

connectivity with other hotel technology, such as door locks, window contacts, location-based services and more.

INTEREL is not a one-size-fits-all product, but instead offers engineered solutions for hotels, considering the needs of operations, IT departments, and the guest experience. Not just another thermostat, INTEREL EMS provides energy savings today with a future-proof platform for changing needs.
